Simplify life around you.

Architects & Builders

86% of builders believe that offering technology improves the marketability of their homes

(*2008 Study of Consumer Electronic Ass.)

Thanks to Automated Technologies, home automation is now an experience that anyone with any budget can afford. Automated Technologies makes it possible for multiple consumer electronics and home systems to work seamlessly together with a single remote.

With the housing market facing challenges after years of amazing growth, builders need to find ways to stand out to buyers.

Differentiating yourself can make the difference between a sale and a house sitting empty. But done right you can create a home for buyers where everything works right because everything works together.

With Automated Technologies expertise homeowners can simplify life around them. Automated Technologies home automation systems can deliver efficiency and control exactly what buyers are looking for. While price and location are big considerations for buyers, sometimes the little things can be the difference between your house and another. With the housing market facing challenges after years of amazing growth, builders need to find ways to stand out to buyers. With Automated Technologies, savvy builders and architects can set the standard for today's high tech homes in the Cayman Islands.

Anything is Possible if you can imagine how home automation can simplify life around you Automated Technologies can make it happen at a budget that suits you, including lighting, safety & security, one touch home theater, door locks, a/c controls, pool controllers, appliance monitors and much more.

New Homes

Are you building a New Home ?

Thanks to Automated Technologies home automation is now an experience that anyone with any budget can afford. Automated Technologies makes it possible for multiple consumer electronics and home systems to work seamlessly together with a single remote.

If you're a builder or Architect the opportunities to sell a home with Home Automation increase by 86% and if you're an individual building a new home the increased value for your home is exponential.

Lighting by the use of wired and wireless technology lighting can be controlled using timers, motion sensors and dimmers, enhancing security and reducing your energy costs. Lights come on when they need to and go off when not needed giving you an automatic way to save energy and money.

Temperature Control reduce your carbon footprint and at the same time conserve energy and help keep money in your pocket with pre-programmed temperature controls. Program your thermostat to know when you're home and when you're out. Air conditioning can easily be turned down or off saving you thousands of dollars each year by not having regular HVAC systems running. You can even automate your shades to open and close with sunlight to help reduce the work your A/C unit has to do by communicating with door contacts & temperature sensors.

ONE Remote Control Control all your entertainment needs. No need for multiple remotes. One remote can simply control your TVs with a variety of video providers or you can play and listen to music in one room or throughout your home.

Energy Efficiency Save precious resources, time and money.

Existing Homes

Simplify life around you with Automated Technologies. It's now easy and simple to take control of your lighting, a/c controls, security system and even your entertainment, music & movies from anywhere in your home or in the world.

With our easy to use products we bring comfort and convenience to you and your family with wired and wireless technology that won't hurt your pocket.

Automated Technologies works with you. You can start with a basic system and upgrade over time with solutions that fit your needs and budget.

Automated Technologies lets you add home automation without knocking down walls or undertaking major reconstruction.

As a matter of fact, most retrofit projects can be completed in a matter of hours or days. And, unlike most home-automation systems, Automated Technologies is incredibly easy to use.

Because systems can operate on a wireless communication standard, you can create an amazing home theater and multi-room music experience in your home – without pulling wires, tearing walls open or undertaking major construction.

Home Automation used to be expensive.

Automated Technologies has changed all that forever.

It's Affordable home automation is now available at a price that won't hurt your pocket. We have scalable designs for every budget. Start with a basic system and upgrade over time. Automated Technologies is there to fit your needs and budget.

It's Easy to Install because of our wired and wireless technology our products are designed to be easily installed in both existing homes and new homes. Systems can be installed in hours saving you time and money without having to tear down walls or remodel your home. Automated Technologies products are customizable to every home.

It's Easy to Use Automated Technologies goal is to "Simplify Life Around You". Now you don't need numerous remotes to control your life's needs. Simplify your lighting, A/C controls, music, movies, entertainment better and easier than ever.

Green Living

The good news is Automated Technologies allows you to combine high tech that will have a positive impact on the environment and one that can match any budget.

Both wired and wireless solutions can be installed in new construction as well as in existing homes giving any homeowner the power to be green. Remote access allows you to adjust air conditioning and lighting so your home is comfortable by the time you arrive. You can even automate your shades to open and close with sunlight to help reduce the work your A/C unit has to do, thereby saving energy and money for you.

Household lighting accounts for 12-15% of your household utility bill and studies suggest 20% of all electricity produced is used for lighting but 50% is wasted by inefficient lighting sources or careless consumers

Lighting We all waste electricity by leaving lights on. Lighting accounts for 12-15% of your household utility bill and more is wasted with inefficient light sources and unoccupied rooms.

Temperature Control reduce your carbon footprint and at the same time conserve energy and help keep money in your pocket. Program your thermostat to know when you're home and when you're out. Air conditioning can easily be turned down or off saving you thousands of dollars each year by not having regular HVAC systems running.

Energy Efficiency Save precious resources, time and money.

Here's what they have to say below;

“We were reluctant to hire an audio-video consultant for our new home due the open-ended costs and fear of an installation that would be convoluted, difficult to use, or prone to breakdown. Working with Mark Jewell and his amazing staff at Automated Technologies, completely paved over our fears. Mark treated us incredibly fairly and provided an installation that is worry free and easy to use to this day. We have never regretted selecting Automated Technologies to provide our home automation and would gladly work with them again.”

Frank Schilling
Cayman Islands Resident

Choosing Automated Technologies to fully automate our home has proven to be an extremely wise decision. Their team of experts not only designed a fully-integrated automation system to meet our specific needs for lighting, climate control, home entertainment, security and surveillance, they also worked closely with us throughout our home's construction phase to ensure a flexible installation process. And given that we opted to use various manufacturer's products, despite Automated Technology's warnings about potential incompatibility issues, their flexibility proved invaluable toward solving the problems that did inevitably arise. Today, thanks to Automated Technologies, our home boasts a state of the art home theatre and full-house automation that works brilliantly. We are exceedingly pleased with both the quality of the AMX control system, and Automated Technology's prompt, efficient and knowledgeable technical team.

This is a company genuinely committed to service and getting the job done right.

Martyn & Nora Burke
Cayman Islands

While working on Water's Edge, Cayman's most prestigious private residences on Seven Mile Beach, Automated Technologies was highly engaged with our early development team to ensure our project was designed to optimal efficiency. Automated Technologies successfully designed and installed the low voltage and wireless networking infrastructure for the building, as well as custom work outs for many of our affluent residents, fulfilling their needs with the type of quality products and services that such customers would expect.

Automated Technologies has a phenomenal team that has always surpassed our expectations. We have not encountered another local provider with a more outstanding level of service and technical expertise.

They have proved to us that they have the professionalism necessary to work on both business and residential requests, solving any infrastructural automation obstacle.

We thank the Automated Technologies team for their exceptional work and look forward to partnering with them on future projects.
